HI THERE!

- UPGRADE TEAM Technology for Solutions is a leading information & communications technology and business solutions provider serving clients throughout the Middle East, North Africa, and Asia. UP TEAM offerings cover all aspects of information and communications technologies, from analysis, planning, design, development, testing and implementation of ICT systems through to maintenance, upgrading and advisory services about optimal application of information technologies.
- At UP TEAM, in-depth experience and thoughtful innovation is applied to customized hardware and software solutions that help clients meet their business goals.
- UPGRADE TEAM has witnessed a steady growth since its establishment by leveraging its unique attributes: experience and resources from international markets combined with local market understanding and know-how.
- Egypt serves as its center of operations, with overseas

ABOUT COMPANY

It is both our individual and collective responsibility to comply and respect laws and regulation to apply UPGRADE TEAM policies and to uphold strong ethical principles to earn trust at all times.

UPGRADE TEAM was founded in 2013

Upgrade Team For Technology Solutions Company is a world in which innovative technology, products and services are all integrated together in harmony and synergy with the aim of improving the level of any organization or business to achieve outstanding performance and efficiency in the current modern era.

Upgrade Team For Technology Solutions offers services ranging from system integration, engineering, design, installation and commissioning along with maintenance and consulting services, so it remains among the most experienced and reliable companies with over 10 years of experience and more than 50 projects implemented throughout its lifetime.

OUR SERVICE

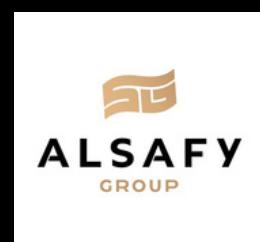

The Low Voltage and Low Current infrastructure is an integral part of any modern building construction from residential, hotel, commercial complexes or multi-purpose structures. We provide an End-to-End service - from the smallest end point to the central back-end control system. This allows for greater control and efficiency in the management of the building's energy use.
